

## Roundup Ready® Corn 2

**Roundup Ready®** Corn 2 hybrids have been enhanced through biotechnology to allow the use of glyphosate herbicides (Roundup WeatherMax®). Roundup Ready crops produce a protein very similar to the one that glyphosate blocks. But different enough that glyphosate is ineffective against the plant. This allows crops with the Roundup Ready® Corn 2 trait to override the glyphosate herbicide. This gives the Roundup Ready® corn system unsurpassed weed control, proven crop safety, control of more than 145 grasses, and broadleaf weeds, as well as, peace of mind.
