

## Roundup Ready® Soybeans

Roundup Ready® soybeans are genetically improved to be tolerant to glyphosate herbicides—allowing over the top post-emerge herbicide application. Roundup Ready® soybeans deliver outstanding crop safety, which aids in protecting early plant growth and vigor, while avoiding possible delayed crop canopy closure. It also eliminates rotational crop restrictions. Roundup Ready® soybeans allows a wide application window. Glyphosate herbicides (Roundup WeatherMAX®) may be used on the crop anytime from emergence through flowering.
