

YieldGard® Corn Borer/Roundup® Ready Corn 2

YieldGard® Corn Borer/Roundup® Ready Corn 2
YieldGard® Corn Borer

YieldGard® Corn Borer offers 24-hour/7-days-a-week, full-plant, full-season protection against corn borers to deliver maximum yield potential. YieldGard® Corn Borer protects your yield, consistently producing more bushels per acre than non-BT corn.

The whole-plant, whole-season protection of YieldGard® Corn Borer significantly reduces crop damage and yield loss due to corn borers. Fields have fewer downed stalks, broken stalks, and dropped ears, making harvest easier and more productive. In side-by-side field comparisons, YieldGard® Corn Borer hybrids outyielded other hybrids by an average of more than 7 bushels per acre.

Controlling Corn Borer:

- Effective, consistent protection from corn borer
- Whole-season, in-plant corn borer protection allows corn to maintain healthier stalks
- More nutrient and moisture uptake means greater yield potential
- Convenience of reduced insecticide handling

YieldGard® Corn Borer Insect-Protected Corn Stewardship

To preserve the benefits and insect protection of the YieldGard® family of corn technologies, an Insect Resistance Management (IRM) plan must be part of every grower's short-term and long-term production strategies. IRM plans are mandated by the U.S. Environmental Protection Agency (EPA), and Insect Resistance Management is a requirement for purchasing YieldGard® Corn Borer corn. Continued use of the YieldGard® products depends on compliance with EPA registration conditions.
